EDUCATION & TRAINING

Johns Hopkins University

Jul 2025

M.S., Business Analysis and Risk Management (STEM)

- GPA: 3.8/4.0 | Beta Gamma Sigma (Top 20%)
- Courses: Python for Business Analytics, Data Analytics, Customer Analytics, Machine Learning, Statistics, etc.
- Research Interests: AI for Business; human-AI collaboration; AI-enabled operations; data-driven decision-making; responsible AI and social equity.

Victoria University & Henan University

Jun 2024

Joint B.S., International Economics and Trade

- GPA: 88/100 (High Distinction)
- Honors: Outstanding Undergraduate's Thesis Award Winner (Jun 2024), Outstanding Graduate (Jun 2024), Scholarship Comprehensive Excellence (Sep 2023 & 2022), Excellence in Leadership (Sep 2023, 2022 & 2021)
- Thesis: *Occupational Gender Segregation in China (2012–2022)*

Certifications:

Google DeepMind AI Research Course (Ongoing);
MITx: Evaluating Social Programs; Data Analysis for Social Scientists;
Microsoft Azure AI Fundamentals (AI-900)

PUBLICATIONS & PRESENTATIONS

Dong, L. (2026, June). *AI as normative reference: Stratified emergence of human–algorithm boundaries in judicial decision-making* [Conference presentation]. Fundamental Issues of a Digital-Intelligent Society: Human-Algorithm Interaction Boundaries Academic Symposium, Beijing, China.

Dong, L. (2026, June). *From risk identification to collaborative reconstruction: A retrospective study of AI-assisted social work in identifying lethality risks in domestic violence* [Conference presentation]. International Symposium on Artificial Intelligence and Social Work, Shanghai, China.

Dong, L. (2025, April). *Occupational gender segregation in China (2012–2021): Implications for business and workforce strategy* [Poster presentation]. INFORMS Analytics+ Conference, Indianapolis, IN, United States.

RESEARCH EXPERIENCE

Research Assistant, Human-Algorithm Interaction Lab

Feb 2026 – Present

University of Oxford, Saïd Business School | Advisor: Prof. Kejia Hu

- Constructed a firm-year panel from earnings calls and 10-K/20-F filings for 60 multinational firms, linking executive rhetoric to subsequent organizational responses using reproducible Python workflows.
- Applied text analysis to 15,000+ China-related statements and estimated fixed-effects, logit, and IV models to evaluate forward-looking associations between managerial language and later firm outcomes.
- Supported faculty-led research by revising manuscripts, synthesizing literature, clarifying empirical arguments, interpreting results, and improving the overall academic presentation of research outputs.

Research Assistant

Sep 2025 – Present

Johns Hopkins University, Carey Business School | Advisor: Prof. Yuexing Li

- Developed a structural demand model (MDCEV) using 36.2M grocery transactions to recover joint discrete-continuous product choice and quantity decisions, extending standard discrete choice frameworks to capture within-category quantity adjustments and cross-product substitution.
- Implemented simulation-based maximum likelihood estimation (MSLE) in Python with gradient-based optimization (L-BFGS-B), recovering price elasticities and welfare implications; benchmarked model performance against MVMNL specifications.
- Supported reproducible research workflows for downstream pricing and inventory analysis, including model comparison, sensitivity checks, and presentation materials.

Research Assistant, Center for International Finance and Economics

Jun 2024 – Dec 2025

Tsinghua University, PBF School of Finance | Advisors: Prof. Jiandong Ju & Dr. Chen Huang

- Constructed quarterly seigniorage revenue measures (1951–2026) and estimated Markov regime-switching models to identify structural breaks across monetary regimes; supported 6 research projects under 2 faculty supervisors.
- Analyzed Trump tariff shocks using cross-country panel data (U.S., U.K., Japan, EU); examined effects on sectoral employment and firm-level productivity using DiD and panel FE estimators.
- Contributed to Hengqin cross-border capital account liberalization policy research, examining institutional design and capital flow implications; co-authoring working paper (Dong & Huang, in preparation).

SELECTED RESEARCH PROJECTS

Singapore Management University, Advisor: Prof. Jiannan Li

Understanding Perceptions around LLM User Profiling

Jun 2026 – Present

- Study how commercial LLMs build models of its users and the user perception around these profiles.

Independent Project

AI as Normative Reference: Stratified Emergence of Human-Machine Boundaries in Judicial Decision-Making

- Built a human-AI comparison dataset from 211 domestic violence self-defense cases using a DeepSeek-based judicial reasoning model; applied McNemar, Wilcoxon, logistic, and OLS regressions across four decision layers.
- Found human-AI agreement collapsed from 96.3% at the fact layer to a 45.7 pp gap in statutory citation, with divergence accumulating into an average 39.5-month sentencing difference — suggesting the human-machine boundary emerges through normative translation rather than factual recognition.

Johns Hopkins University, Advisor: Prof. Nazli Turken

Systemic Discrimination in Mortgage Lending: Evidence from CRA-Linked HMDA Data

May 2025

- Used 10M+ HMDA records and 10 logistic regression specifications to study how financial institutions allocate credit; found that broader mortgage access under CRA coverage coexisted with persistent pricing disparities for minority borrowers.

INDUSTRY EXPERIENCE

Research Assistant, Shanghai Artificial Intelligence Lab, Shanghai

Jun 2026 – Present

- Support applied AI research through literature review, data analysis, and model evaluation. Assist in drafting research materials and translating technical findings into academic outputs.

AI Governance Intern, RADAR Governance, Washington, D.C.

Aug – Sep 2025

- Authored a policy article on AI governance in M&A due diligence, examining governance gaps as a source of hidden transaction risk.

Investment Banking Intern, Sinolink Securities Co., Ltd, Beijing

May – Jul 2024

- Built comparable company, precedent transaction, and DCF models; supported due diligence, pricing discussions, and client-facing pitchbooks and deal materials.
- Reviewed company filings, financial statements, and sector reports to evaluate business fundamentals, competitive positioning, and growth prospects.

Financial Risk Management Intern, KPMG Advisory (China), Sichuan

Jul – Sep 2023

- Conducted financial risk and internal control analysis; assessed process design, operational exposure, and compliance risks across key business functions.
- Prepared client reports summarizing governance gaps, control effectiveness, and risk mitigation recommendations.

LEADERSHIP & SERVICES

Instructor & Admissions Coach, Shunjia Education Technology

Feb 2026 - Present

Manuscript Reviewer, Machine Learning Applications in Finance, Tsinghua University

Jul 2024 – Aug 2025

Consultant, JHU Community Lab & JHU Consulting Club

Fall 2024 & Spring 2025

Co-Founder, Nanyang E-zhou Digital Platform

Feb 2022 - Sep 2022

TECHNICAL SKILLS & ADDITIONAL

- **Skills:** Python, R, Stata, Git/GitHub, AWS EC2, ArcGIS, LaTeX
- **Languages:** Native Mandarin (Simplified & Traditional), Fluent English, Basic German
